HENRIQUE MAYER

Python Backend Developer — Django/DRF, FastAPI

São Paulo, SP, Brazil · henriqmayer@gmail.com · +55 (51) 98606-2648 · linkedin.com/in/henriqmayer · github.com/henriqmayer

SUMMARY

Python backend developer with 7+ years of experience, including 5 years at ESSS. Sole developer of a Django/DRF platform with 580+ active consumers, maintaining and evolving the data model, REST APIs, Redis caching, and cloud/Docker deployments end to end. Strong TDD and code-quality background (pytest, factory_boy, mypy, flake8), with direct client experience at Petrobras and other oil & gas operators. Interested in building LLM-powered features and AI API integrations.

SKILLS

- **Python & Django:** Python 3, Django, Django REST Framework (DRF), FastAPI, django-allauth, drf-spectacular
- **Data & caching:** PostgreSQL (incl. ArrayField), Redis, SQL, data modeling
- **Testing:** pytest, factory_boy, TDD, mypy, flake8, black, isort
- **DevOps & cloud:** Docker, Docker Compose, Gunicorn, Uvicorn, Traefik, DigitalOcean, Hostinger, Portainer, CI/CD (GitLab CI), Linux, Git
- **Frontend:** HTMX, Bootstrap 5, Django templates, JavaScript
- **Practices:** Agile/Scrum, performance optimization, multiprocessing/multithreading
- **Languages:** Portuguese (native), English (C1)

EXPERIENCE

Python Backend Developer — Plataforma Cooperativa de Abastecimento Agroecológico *Jan 2026 – Present*
Sole developer & technical owner · Freelance · Remote

Django platform for community agriculture and food baskets — consumption cells, weekly/monthly basket cycles, and collective purchasing (celulasconsumo.ufsc.br).

- Sole developer and technical owner, maintaining and evolving the platform end to end — data model, REST APIs, role-based UI (Django templates, HTMX), and production operations.
- Scope requirements and prioritize features directly with cooperative coordinators.
- Serves 580+ active consumers across 13 consumer groups; 7,293 baskets and R$ 322k+ transacted.
- Build REST APIs with DRF and drf-spectacular (OpenAPI), backed by PostgreSQL (incl. ArrayField) and Redis caching.
- Ship improvements to core flows: consumption cells, basket cycles, collective purchasing, and a PIX wallet.
- Own local/staging/production deployments on DigitalOcean and Hostinger VPS (Docker Compose, Traefik, Gunicorn, Uvicorn) with GitLab CI and Portainer.
- Enforce quality with pytest/factory_boy suites, black, flake8, isort, and mypy.

Python Developer — ESSS *Jan 2021 – Jan 2026*
Florianópolis, SC, Brazil

ESSS builds engineering simulation software for the energy industry; worked across SimBR (3D geology, with Petrobras), ALFAsim (multiphase flow), and SourSimRL (reservoir souring).

- Cut simulation load times from 30–60s to 5–10s through I/O and chart-rendering optimizations.
- Shipped 10+ features across three simulation products, including checkpoint/restore.
- Built FastAPI services and cross-simulator integrations for data exchange.
- Developed Qt/PyQt interfaces for data entry and interactive charts.
- Worked with Petrobras (CENPES) and an operator consortium in agile teams using TDD, peer code review, and feature-design meetings.

Python Developer — Networks and Applied Computing Group, UFSM *Aug 2019 – Jul 2020*
Research scholarship · Santa Maria, RS, Brazil

- Built a Python fog-computing simulator with multiprocessing and threads to benchmark load balancing.

Full Stack Developer — Associação Brasileira de Pesquisadores em Jornalismo (SBPJor) *Mar 2018 – Jul 2019*
Scholarship · Santa Maria, RS, Brazil

- Built the Django/DRF backend and REST API for the SBPJor Congress app, consumed by Android and iOS.
- Contributed to the Ionic/JavaScript mobile app with a personalized agenda and notifications.

Earlier: *C# Developer Intern — Exército Brasileiro (2016–2018) and CNPq–MCT (2014–2016); Unity/C# software.*

EDUCATION

Instituto Federal Sul-rio-grandense (IFSUL) — Technical Diploma in Information Technology *2011 – 2014*
